KNURLING

Accuracy

You get precision knurling and burnishing when you use Slater Tools Knurling Toolholders, because you are getting features and production advantages not found in any other tool holders. These knurl tool holders are of the straddle-type, which tangentially feeds to center from the cross slide of the automatic or turret lathe. Adapter blocks allow the holders to fit most makes, models, and size of machines. Holder assemblies are designed to compensate for any slight misalignment with centerline of the spindle. Size control is made easy through simultaneous adjusting of both knurl roll holders. Slater Tools straddle-type knurl holders increase machine life and save on setup time and maintenance costs. No extra expense for tooling, these tool holders use standard, commercially available knurl rolls!

Slater Swing Arm and Vertical Slide

Examples of Third "C" and Fourth "D".
